

OBJECTIVE

Product-oriented Software Engineer with 2+ years of experience building and scaling intelligent, data-driven products across AI, robotics, and enterprise systems. Proven track record of leading products end-to-end from discovery, PRD development, and roadmap definition to agile execution and iterative optimization. Strong expertise in AI systems, generative AI applications, and analytics-driven decision-making. Adept at translating complex technical capabilities into customer-centric solutions that align business objectives with scalable engineering execution. Passionate about building impactful AI-powered products that drive measurable outcomes.

EXPERIENCE

Software Product Developer,
916 Coco Brand Pvt Ltd

March 2025 – Present
Ernakulam, India

- Designed, developed, and deployed a full-scale enterprise ERP system automating procurement, accounting, sales, inventory, production and transfers across multiple business units.
- Worked directly with operations, finance, and sales teams to define requirements, model workflows, and translate business needs into production-ready software.
- Built end-to-end inventory, inter-unit transfer, and processing workflows with real-time tracking, variance detection and automated stock and ledger updates.
- Implemented core accounting and compliance features including ledgers, vouchers, financial statements, taxation and branch-level profitability reporting.
- Developed real-time dashboards, reports, and notification systems enabling leadership to monitor operational and financial KPIs in a single platform.
- Currently building AI-driven forecasting and analytics modules to improve demand planning, inventory optimization and operational decision-making.

Software Engineer - Teleoperations (Research and Development),
Controlone AI

July 2023 - Jan 2025
Bangalore, India

- Contributed to building an operating system for slow-moving industrial vehicles (forklifts, BOPT, and similar equipment) to enable driverless and teleoperated warehouse automation.
- Developed a web application to monitor and operate the physical AI agent, enabling real-time vehicle telemetry, live video streaming, and low-latency control inputs for remote operators.
- Implemented text-to-text and voice-based interactions including voice-to-text, text-to-voice, and voice-driven LLM-powered operations to simplify vehicle control and task execution.
- Built a vision-based autonomous system for industrial vehicles, taking it from MVP to production-ready deployment with reliable perception and decision-making capabilities.
- Worked hands-on with ROS2 nodes, simulators, and physical vehicles, integrating software directly with real-world robotic systems in warehouse environments.
- Designed and enhanced human-vehicle interaction systems ensuring safe, responsive, and intuitive teleoperation and assisted-autonomy scenarios.
- Collaborated on evolving the platform from traditional robotics control to AI-driven agent architecture supporting scalable warehouse deployment.
- Integrated ROS2-based automation pipelines with backend services and databases to support real-time monitoring, analytics, and operational visibility.

EDUCATION

Bachelor of Technology in Computer Science and Engineering
Amrita Vishwa Vidyapeetam, Amritapuri, Kerala.

2019 - 2023

SKILLS

Product Management	Product discovery, PRD creation, Requirements gathering, Feature prioritization, Roadmapping, Agile (Scrum), Sprint planning, Stakeholder management, KPI tracking, Product analytics, Market & user research
AI Product	Generative AI applications, AI feasibility analysis, Responsible AI, AI product lifecycle, AI use case development
Software Development	SDLC, System design fundamentals, REST APIs, Backend architecture
Programming	Python, JavaScript, C
Artificial Intelligence	Machine Learning, Computer Vision, Model evaluation basics
Web Technologies	React.js, Node.js, Express.js, HTML, CSS
Database	SQL, MongoDB
Cloud	AWS
UI/UX	Figma, Adobe XD

CERTIFICATIONS

IBM AI Product Manager Professional Certificate. – IBM

Coursera [Certificate Link](#)

Microsoft AI Product Manager Professional Certificate. - Microsoft

Coursera [Certificate Link](#)

Product Design and UX/UI Fundamentals. - Microsoft

PROJECTS

Intelligent Demand Forecasting Inventory Optimization Platform. Developed an AI-driven forecasting and analytics platform focused on demand planning and inventory optimization. Implemented scalable backend services and data pipelines, integrated machine learning models for time-series forecasting, and built interactive dashboards for real-time insights. Applied AI techniques to improve operational decision-making, showcasing strong product development and software engineering capabilities. ([Git Link](#))

Surveillance Using Swarm of Drones. Developed an algorithm for a surveillance system using a swarm of drones in a 2D simulation, inspired by the cooperative behavior of social insects. Leveraged swarm intelligence to create a decentralized and self-organizing group of UAVs. Explored applications in various fields like agriculture, construction, and search rescue. Demonstrated expertise in swarm robotics and simulation. ([Git Link](#))

Organization Security Framework. Designed and implemented an organization-wide cybersecurity framework following extensive research, addressing end-to-end security requirements. The system included an email client for spoofed email classification, a network-level web application firewall (WAF) with detailed logging of suspicious requests, and a secure password generator and manager. The research and system design were consolidated and published as a technical paper, demonstrating strong capabilities in security research, system architecture, and applied implementation. ([Git Link](#))

Instagram Fake Account Detection. Developed a machine learning and data science project for identifying fake Instagram accounts through supervised classification techniques. Performed data preprocessing and feature engineering on social media account attributes, trained and evaluated multiple ML models, and deployed the best-performing model as a web application for real-time inference. Showcased end-to-end ML development, backend integration, and model deployment skills. ([Git Link](#))
