

PROFESSIONAL SUMMARY

AI-Driven Product Leader & Former Founder with 8+ years of experience scaling zero-to-one FinTech, Enterprise SaaS, and Agri-tech ecosystems. Rooted in strong systems-level thinking from a mechanical engineering foundation, I specialize in architecting complex credit marketplaces and robust data pipelines (RAG architectures, predictive ML, computer vision) that bridge the gap between Fortune 500 enterprises and “credit-invisible” MSMEs. Adept at driving localized, inclusive innovation, deploying vernacular NLP agents across Northern and North-Eastern tier-3 markets to break digital literacy barriers and slash CAC. A strategic operator with a proven track record of solving high-stakes data bottlenecks, monetizing advanced analytics, and facilitating multimillion-dollar capital flows with zero-friction onboarding.

SAMPLE ASSIGNMENTS / PROJECTS

Unified Lead Queue: <https://tinyurl.com/3d6xvmzm>

Loan Management System Prototype: <https://amount-flag-69813754.figma.site>

SKILLS

Product Strategy & Business: 0-to-1 Product Development, Go-to-Market (GTM) Strategy, B2B2C Marketplaces, SaaS Monetization, Agile/Scrum Leadership, A/B Testing, Enterprise Contract Renewals, B2B Supply Chain Telemetry.

AI & Machine Learning: RAG Architectures, Small Language Models (SLMs), Predictive ML (XGBoost, Random Forest), Natural Language Processing (NLP), Computer Vision / Advanced OCR (Tesseract), Spatial Parsing, Behavioral ML Credit Scoring.

Technical Architecture & Infrastructure: Multi-Tenant System Architecture, ETL Data Pipelines, RESTful APIs & SFTP, AWS (Lambda, EC2, S3), Python (Django), Node.js, React Native, PostgreSQL, Redis, Enterprise ERP Integrations (SAP, Workday).

FinTech & Domain Expertise: Supply Chain Finance (SCF), Agri-Fintech, Tax Reconciliation (GSTR 2A/2B), Alternative Credit Underwriting, MSME Digital Lending, Identity Fraud Prevention, ITSM & Shift-Left IT Automation.

Localization, UX & User Journeys: Multilingual Product Scaling (English, Hindi, Nepali), Conversational AI Agents, Zero-Friction Video-KYC Funnels, Digital Adoption Platforms (DAP), Robotic Process Automation (RPA), Omnichannel Chatbots.

PROFESSIONAL EXPERIENCE

Director of AI Products | **FAI** | Jan 2025 – Nov 2025

Helping Fortune 500 clients like McKinsey, AMEX, and Tata reclaim millions in global and domestic tax through intelligent automation.

- Built a **Scalable Tax Reconciliation Engine**: Directed the development of a multi-tenant B2B/B2C platform with robust ETL pipelines (RESTful APIs, SFTP, EML parsing) to synchronize GST portal data and SAP ERP ledgers, processing ~\$0.5B in GSTR 2A/2B datasets for 1,200+ enterprise clients at 100% compliance. **Directly enabled INR 18Cr+ in annual SaaS ARR** from enterprise tier subscription upgrades and expanded seat licenses.
- Engineered an **Anti-Hallucination Document Extraction Pipeline**: Designed an advanced RAG + SLM architecture to accurately parse complex multi-region hotel invoices, surging extraction accuracy from 70% to 98% and cutting token compute costs by 40%. **Saved ~INR 2.4Cr/year in compute and manual review costs**, directly protecting gross margin on the AI product tier.
- Deployed **Event-Driven CRM Automation**: Built NLP-triggered autonomous vendor/client follow-up workflows, reducing end-to-end pipeline TAT by 7 days. **Accelerated revenue recognition by ~INR 4Cr/quarter** by unblocking delayed GST data collection that was stalling client billing cycles.
- Launched an **Interactive BI Analytics Dashboard**: Structured flattened relational data into dynamic GST/VAT visualization modules with automated reporting for Fortune 500 stakeholders. **Drove a 15% increase in product revenue (~INR 6Cr incremental ARR)** by proving ROI and accelerating upsell conversations with CFO-level buyers.

External Product Consultant | **Supermoney** | Mar 2024 – Jan 2025

- Built a **Full-Spectrum AI Credit Marketplace**: Architected a dual-engine lending platform merging embedded supply chain telemetry with alternative startup cash-flow data. Connected 20,000+ credit-invisible MSMEs and fast-growing startups to 30+ lenders, facilitating INR 300Cr+ in working capital disbursements. **Generated ~INR 3Cr in platform origination fee revenue** (1% average take-rate on facilitated loan volume) within the first 9 months.
- Solved **Unstructured Financial Docs with GenAI**: Transformed a highly manual underwriting process into a 10-minute AI decision engine using RAG + distilled SLMs, surging credit decisioning speed by 85% and enabling same-day disbursements. **Reduced per-loan processing cost by ~60%, unlocking ~INR 1.2Cr in annual operational savings** and enabling the team to scale from 200 to 800+ monthly disbursements.
- Built a **Predictive Risk Brain for Dynamic Underwriting**: Engineered ML models analyzing real-time alternative data (seasonal FMCG transactions, supply chain signals) to dynamically throttle credit limits (INR 5L–INR 2Cr), maintaining a sub-1% default rate. **Protected ~INR 3Cr in at-risk NPA exposure** that would have otherwise resulted in write-offs on the volatile MSME loan book.

VP Product and Growth | Jai Kisan (Bharat Khata) | Dec 2022 – Feb 2024

- Built a **Rural-First Credit Infrastructure**: Led the 0-to-1 launch of an agri-specific Loan Origination System (LOS) tailored for the Bharat market, digitizing and disbursing INR 500Cr+ in annualized agricultural credit. **Contributed directly to ~INR 12–15Cr in annual interest and processing fee revenue** by enabling the company to scale from pilot to full-state rollout across 3 agri-corridors.
- Engineered a **Localized Document Intelligence Pipeline**: Deployed spatial parsing and SLMs tuned for regional anomalies to autonomously validate non-standard handwritten mandi receipts and vernacular trade ledgers, collapsing loan approval TAT from 2 weeks to under 3 hours. **Reduced field verification costs by INR 80L/year** while enabling 4x throughput on the same operational headcount.
- Formulated a **Yield-Backed Underwriting Model**: Built an ML scoring algorithm integrating crop seasonality, regional monsoon telemetry, and real-time commodity pricing to dynamically scale dealer working capital limits, holding portfolio delinquency below 1.2%. **Prevented an estimated INR 6Cr in NPA losses** over the operating period by replacing collateral-based approvals with data-driven risk controls.
- Overcame **Digital Literacy Barriers via Voice AI**: Launched a multilingual conversational AI assistant (English, Hindi, Nepali) for self-serve KYC and origination across tier-3/4 markets, slashing CAC by 35% and reducing field-agent dependency. **Saved ~INR 1.5Cr annually in field-agent and acquisition costs**, directly improving unit economics per loan.
- Orchestrated **End-to-End SCF Digitization**: Deployed a fully closed-loop Supply Chain Finance engine integrated with anchor corporate ERPs for instant EIPP and automated reconciliation, processing INR 1,000Cr+ in annualized invoice volume. **Unlocked ~INR 8Cr in annual SCF fee revenue** (0.8% platform fee on facilitated invoice financing) from anchor-side monetization.

VP Product and Marketing | Payme | Feb 2022 – Dec 2022

- Spearheaded a **High-Velocity Consumer Credit Funnel**: Integrated multi-nodal API gateways (CIBIL, NSDL, Account Aggregators) for sub-2-minute algorithmic approvals, processing 50,000+ monthly micro-loan applications. **Supported ~INR 10Cr in monthly disbursements, generating ~INR 1.2Cr/month in processing and interest fee revenue** at the platform's peak run-rate.
- Defeated Fraud with **Computer Vision**: Architected a deep learning OCR pipeline to parse, flatten, and cross-verify PAN cards and bank statements, plummeting identity fraud by 40% and pushing extraction accuracy to 95%. **Prevented ~INR 2.5Cr in estimated annual fraud-related write-offs** while reducing manual KYC ops costs by INR 40L/year.
- Architected an **Alternative ML Credit Engine**: Deployed predictive ML models analyzing transactional SMS patterns, utility payments, and device telemetry to safely approve 30% more credit-invisible applicants while holding NPAs below 2.5%. **Grew the addressable borrower base by 30%, generating ~INR 3Cr in incremental annual revenue** from applicants who would have been declined under traditional bureau scoring.
- Optimized **Mobile Conversions & Digital Collections with NLP**: Deployed an omnichannel NLP chatbot for frictionless Video-KYC completion and automated WhatsApp collection nudges, boosting funnel conversion by 22% and reducing 30-day delinquency by 15%. **Translated to ~INR 1.8Cr in recovered collections** on an annualized basis and a measurable reduction in the cost-to-collect per delinquent account.

Product Head (Co-Founder) | Bonoape | Jan 2019 – Feb 2022

- Architected **Retail Middleware**: Founded and scaled a B2B2C FMCG platform; deployed a free mobile-first smart billing app (React Native) that invisibly digitized inventory for 400+ daily active Kirana stores, with a 400% usage spike during early-pandemic supply chain disruptions.
- Engineered a **High-Speed OCR Pipeline**: Deployed an asynchronous computer vision engine (Tesseract, AWS Lambda) custom-trained on degraded thermal paper to parse 30-item distributor invoices in under 15 seconds. **Eliminated ~INR XXL/year in manual data-entry costs** for distributor clients and became a key stickiness driver for paid tier retention.
- Planned a **Multi-Tiered Monetization Engine**: Built a scalable B2B2C revenue model featuring premium retailer SaaS, an algorithmic FMCG ad-bidding network, and a high-concurrency inventory API (Node.js/Redis) for hyperlocal fleet dispatch.
- Delivered **Real-Time Analytics**: Launched an enterprise dashboard granting FMCG giants (Unilever, MTR) visibility into 500+ micro-markets. Scaled to Pre-Series A term-sheet discussions before executing a structured, ethical shutdown, migrating users and returning angel capital following the pandemic-related loss of a key co-founder.

Product Owner (AI Implementation) | Anakage (Accenture APAC) | Feb 2017 – Oct 2018

- Built a **'Shift-Left' IT Automation Engine**: Spearheaded an intelligent endpoint management platform integrating with ServiceNow and Jira to autonomously deflect 40% of routine IT requests for Fortune 500 clients. **Contributed to ~\$2M+ in annual client helpdesk cost savings per enterprise account**, directly supporting renewal and upsell cycles and a 25% increase in contract renewal rates. Launched an **Enterprise Software Telemetry Dashboard**: **Directly drove a 25% increase in enterprise contract renewals** by proving productivity gains, contributing to a multi-million dollar expansion in Accenture APAC's managed services book.
- Deployed a **'Self-Healing' RPA Infrastructure**: Built a background telemetry and RPA pipeline that autonomously resolved endpoint compliance gaps, VPN drops, and cache bloat, slashing MTTR from 4 hours to a 1-click 10-second fix. **Reduced L1/L2 support ticket volume by 40%, saving clients ~\$800K/year per 10,000-seat enterprise deployment**, a key metric cited in Fortune 500 case studies.
