Professional Summary

Product Manager with 5 years of combined experience in freight forwarding operations and SaaS product management. Transitioned from a 2-year role at a freight forwarder directly into product at a logistics-tech startup. Understand what freight forwarding teams need from software because I was the person using inadequate software for 2 years.

Work Experience

Product Manager

FreightBridge Technologies Pvt. Ltd. (FMS SaaS, 45 employees), Ahmedabad · Sep 2021 – Present

- Owns the freight management and shipment lifecycle modules — built the first version of both from user research conducted at 6 freight forwarder clients across Gujarat and Maharashtra
- Runs discovery as a continuous process: embedded with 1 client ops team for 1 week every quarter to watch the software being used, not just hear about it
- Shipped 9 features in 3 years; retired 2 that were underused; one feature proposed by a client during discovery became the most-adopted feature in the product's history
- No PM manager above — escalates directly to co-founder on strategic calls, owns tactical delivery independently
- Built the product's beta feedback process: structured weekly call with ops lead at 3 pilot clients for 8 weeks after each major release

Freight Operations Executive

Transworld Group, Mundra Port Office · Jun 2019 – Aug 2021

- Managed LCL and FCL shipment coordination at Mundra Port — documentation, carrier booking, customs coordination, and client status updates
- Dealt directly with CHA partners, terminal operators, shipping line offices, and customs officers daily
- Handled a 4-month period covering a team member's medical leave — managed their entire portfolio of 15 accounts with no additional support
- Flagged a recurring issue with a shipping line's EDI file format that was causing delays across 3 clients — escalated, followed up, and resolved by coordinating directly with the shipping line's operations team

Education
