PROFESSIONAL SUMMARY

Product Manager with 2.5 years in SaaS product roles, preceded by 2 years in manufacturing plant operations. The operations background means I understand physical workflows, constraints, and the gap between how processes are designed and how they are actually followed. Moved into product to solve problems I saw first-hand on the plant floor.

WORK EXPERIENCE

Associate Product Manager

FieldEase Technologies (Field Operations SaaS, 60 employees), Pune · Oct 2022 – Present

- Owns the maintenance scheduling and work order management module — used by plant operations teams at 40+ discrete manufacturing clients
- Spent first 30 days doing user immersion: sat with shift supervisors, quality engineers, and maintenance leads at 3 client plants before writing a single PRD
- Shipped a mobile-first work order flow that reduced average work order closure time by 38% — designed for the person standing on the shop floor, not the manager in the office
- Iterated the checklist feature 4 times in 6 months based on field feedback; the 4th version became the most-referenced feature in client NPS comments
- Reports to Head of Product; owns this module independently, attends all customer discovery calls for it

Production Engineer → Senior Production Engineer

Mahindra Sona Ltd. (Auto Components, 500 employees), Pune · Jul 2020 – Sep 2022

- Managed day shifts in the precision machining shop — 45 CNC machines, 3 product families, 8 operators per shift
- Led a 3-month downtime reduction project: root-caused the top 5 unplanned stoppages, redesigned 2 preventive maintenance cycles, reduced average unplanned downtime from 14% to 8% in the shift
- Redesigned the shift handover documentation process after recurring production data discrepancies between shifts; new process caught 3 quality escapes in the first month

EDUCATION

B.E., Mechanical Engineering · College of Engineering Pune (COEP) · 2016–2020 · First Division
